1 Documentation edition and implementation scope

This is the 5.3.0 documentation edition, dated 2026-11-09. It carries forward the system and service contracts from the retained 5.2.2 documentation and identifies the current primary implementation sources. The former `documentation/v5.2.2` folder is retained unchanged.

Document version 5.3.0 is distinct from executable, dependency, registered system/service and wire-contract versions. Values still defined by the source (including 5.2.2 artefact versions, 1.0.0 service versions and `SysMonitor-AMQP-IDD-5.2.2` payload identifiers) are preserved. This documentation update does not change runtime behaviour or establish a new implementation release. Historical verification statements describe the tests recorded in the inherited baseline; this revision validates document compilation and references.

2 Legacy monitor HTTP interface

Request `GET/localcloud/monitor/echo`, no body. Response200text `Gotit!`. The source's legacy requester accepts `Authorization:BearerSYSTEM//name` as a declared name; alternative bearer handling is inherited and does not establish certificate-bound authentication. No native TLS client certificate is required by this listener. Invalid or absent legacy requester yields401.

This route is separate from `/api/` console-cookie middleware. Console cookies do not protect or replace the legacy requester check. An echo response is not evidence of registry publication, trusted identities, provider health, AMQP publishing or production suitability.

The source registers monitor1.0.0 at `/localcloud/monitor` with GET/echo, generic_http/policy NONE. No sysMonitor AMQP binding exists in this implementation; do not infer one from the dashboard's SysMonitor view or invent an associated telemetry contract.

3 References and qualification

See `docs/source-manifest.json` for original/relocated source SHA256 records, `VERIFICATION.md` for checks actually run, and `docs/LocalCloudManager.sysml` for the descriptive, unparsed variability model. No Java interchangeability, native TLS or sysMonitor publisher is claimed. Existing cloud source and running deployment remain unchanged.

4 Revision record

2026-11-09: Documentation edition 5.3.0 derived from the retained 5.2.2 sources; metadata and local references updated. Runtime and wire-contract versions remain source-defined.
