# 1 Documentation edition and implementation scope

This is the 5.3.0 documentation edition, dated 2026-11-09. It carries forward the system and service contracts from the retained 5.2.2 documentation and identifies the current primary implementation sources. The former `documentation/v5.2.2` folder is retained unchanged.

Document version 5.3.0 is distinct from executable, dependency, registered system/service and wire-contract versions. Values still defined by the source (including 5.2.2 artefact versions, 1.0.0 service versions and `SysMonitor-AMQP-IDD-5.2.2` payload identifiers) are preserved. This documentation update does not change runtime behaviour or establish a new implementation release. Historical verification statements describe the tests recorded in the inherited baseline; this revision validates document compilation and references.

# 2 Legacy monitor service

Definition `monitor`, version1.0.0, producer LocalCloudManager, base `/localcloud/monitor`, operation echo. This historical registration name is retained by source relocation; it is not the canonical sysMonitor telemetry contract or a recommendation for new services.

## 2.1 Semantics

A valid legacy requester receives text `Gotit!`. This proves only that the echo handler responded, not provider readiness, registration, federation or broker connectivity. The inherited requester accepts a declared `BearerSYSTEM//name` without cryptographic proof.

No native sysMonitor AMQP publisher exists in this package. The dashboard can read SysMonitor data from a provider, but consuming monitoring data does not make this manager a telemetry publisher.

# 3 References and qualification

See `docs/source-manifest.json` for original/relocated source SHA256 records, `VERIFICATION.md` for checks actually run, and `docs/LocalCloudManager.sysml` for the descriptive, unparsed variability model. No Java interchangeability, native TLS or sysMonitor publisher is claimed. Existing cloud source and running deployment remain unchanged.

# 4 Revision record

2026-11-09: Documentation edition 5.3.0 derived from the retained 5.2.2 sources; metadata and local references updated. Runtime and wire-contract versions remain source-defined.
